Subject: Database Management System

Name of the student:

Roll Number:

1. The ..... can be used to ensure database integrity.  
A. entity integrity  
 B. database constraints  
C. referential integrity  
D. cardinality
2. A file manipulation command that extracts some of the records from a file is called  
 A. SELECT  
B. PROJECT  
C. JOIN  
D. PRODUCT
3. In case of entity integrity, the primary key may be  
 A. not Null  
B. Null  
C. both Null and not Null  
D. any value
4. In SQL the word 'natural' can be used with  
 A. inner join  
B. full outer join  
C. right outer join  
D. all of the above
5. Which are the two ways in which entities can participate in a relationship?  
A. Passive and active  
 C. Simple and Complex  
D. All of the above.
6. Which one of the following statements is false?  
A. The data dictionary is normally maintained by the database administrator  
 B. Data elements in the database can be modified by changing the data dictionary.  
C. The data dictionary contains the name and description of each data element.  
D. The data dictionary is a tool used exclusively by the database administrator
7. The database schema is written in  
A. HLL  
B. DML  
 C. DDL  
D. DCL
8. When the values in one or more attributes being used as a foreign key must exist in another set of one or more attributes in another table, we have created a(n) .....  
A. transitive dependency  
B. insertion anomaly  
 C. referential integrity constraint  
D. normal form
9. An entity set that does not have sufficient attributes to form a primary key is a  
A. strong entity set  
 B. weak entity set  
C. simple entity set  
D. primary entity set

10. \_\_\_\_\_ is a condition specified on a database schema and restricts the data that can be stored in an instance of the database.

- A. Key Constraint
- B. Check Constraint
- C. Foreign key constraint
- D. integrity constraint

11. Grant and revoke are \_\_\_\_\_ statements.

- A. DDL
- B. TCL
- C. DCL
- D. DML

12. \_\_\_\_\_ command can be used to modify a column in a table

- A. alter
- B. update
- C. set
- D. create

13. A primary key if combined with a foreign key creates

- A. Parent-Child relationship between the tables that connect them
- B. Many to many relationships between the tables that connect them
- C. Network model between the tables that connect them
- D. None of the above

14. A..... is a set of columns that identifies every row in a table.

- A. composite key
- B. candidate key
- C. foreign key
- D. super key

15. The natural join is equal to

- A. Cartesian Product
- B. Combination of Union and Cartesian product
- C. Combination of selection and Cartesian product
- D. Combination of projection and Cartesian product
